

How To Install Bouncy Bands® for Chairs:

1. The Bouncy Band is packaged inside the support pipes. Pull to remove them from the support pipes after opening the package. (Do not break open the tabs on the support pipes.) Remove the temporary rubber bands used before installation.

2. Insert one support pipe into each end of the Bouncy Band so it rests inside the groove of the support pipe.

3. Place one of the support pipes on one of the front legs on the chair.

4. Now, stretch the band so the other support pipe can go up the other front chair leg. The tension from the band will keep the Bouncy Band and support pipes in place when the chair is moved, lifted or stacked.

Students can enjoy bouncing their feet while they sit in their chair! 😊

Note: Bouncy Bands are also available for Desks.
